## Actuation

Turning the cap (pos A/B) allows 4 different directions of drive.

Cover (1) has to be opened before turning the cap (2).

Insert the screwdriver into the gap between housing and cap and turn until the cap snaps off.

Remove the cap, turn it 180° (4), latch it into the housing and close the cover.

## Notes

The specified degree of protection (IP code) of the safety switch only applies when the cover is closed and an at least equivalent cable gland with corresponding cable or corresponding cable coupling is used.

The arrangement and fastening of the safety switch and actuator must be carried out in accordance with DIN EN ISO 14119. With radius actuation, the mechanical service life may be reduced.

The minimum radii can be found in the data sheet of the respective actuator or in the operating and mounting instructions of the switchgear and apply to a pivot point on the level of the upper edge of the enclosure  $S_0$ .

The actuator slot that is not used must be closed by the cover.

R<sub>Amin</sub> and R<sub>Bmin</sub> depend on the actuator. Applies accordingly also to lateral retraction directions.
